AMENDMENTS TO THE SPECIFICATION

The Abstract of the Disclosure is being amended as follows:

## ABSTRACT

A chemically bonded biomaterial element composed of an inorganic cement, exhibiting minimal dimensional changes upon hardening and long-time use, improved mechanical properties and improved translucency. An algorithm to describe the micro-structure is expressed as

$$\lambda = \frac{d * (1 - V_F)}{(V_F)}$$

where  $\lambda$  is the distance between filler particles of mean size  $d$ , and  $V_F$  is the volume content of non-reacted cement and added filler, and where  ~~$\lambda = 10 \mu\text{m}$~~   $\lambda \leq 10 \mu\text{m}$ . The invention also relates to a device in connection with the preparation of a chemically bonded biomaterial element according to the invention.
